EDUCATION

Rutgers University – New Brunswick

Expected May 2028

B.S. in Computer Science and Finance (double major) | GPA: 3.8/4.0

New Brunswick, NJ

- **Honors:** Dean's List, HackRU Finalist (Fall 2025, top 5% of 142 projects), All-Star Code Scholar
- **Activities:** NSBE, CodePath, USACS
- **Coursework:** Data Structures & Algorithms, Computer Architecture, Discrete Math, Probability

TECHNICAL SKILLS

Languages: Java, Python, C++, TypeScript, JavaScript, Kotlin, Dart, PHP, SQL, HTML/CSS

Frameworks & Tools: React, Next.js, Flutter, Flask, Pandas, NumPy, pytest, Git, GitHub Actions, Docker

Cloud & Databases: Cloudflare Workers, Supabase, Firebase Firestore (NoSQL), PostgreSQL, SQLite

AI-Assisted Development: Claude Code, Cursor, Kiro, Codex

EXPERIENCE

Co-Founder & Software Engineer

Jun 2025 – Present

Creo – startup validation platform (984 signups, 25–50 daily active users)

New Brunswick, NJ

- Built Creo with one co-founder: Next.js/TypeScript, Supabase auth, Firestore, GPT-4o on strict JSON schemas
- Wrote the scoring engine: 28 weighted questions in six dimensions roll up to a 0–100 score with flags and a stage label
- Competitor check, stage 1: a keyword pre-filter over 30 industry maps settles clear cases with no API call
- Stage 2: a rule-based validator screens vague differentiation claims before GPT-4o runs against a 100-competitor list
- Reworked the scoring flow on beta feedback; onboarding drop-off fell 28% from the 45-user beta to the next cohort

ERP Implementation Lead

May 2025 – Aug 2025

DIKAM Fashion Ltd – garment manufacturer; founder in Africa's Business Heroes 2025 Top 10

Kigali, Rwanda

- Wrote an Odoo module in Python ("Manufacturing v2") that replaced the stock Purchase-to-Manufacturing flow
- Migrated 10 years of Excel purchase, sales, payroll and inventory books into normalized SQL tables with Python
- Reconciled inconsistent supplier names, date formats and currencies across the books before load
- Led the Odoo rollout (production, inventory, procurement, payroll, finance); month-end close: 2 weeks to 4 days

Data Analyst Researcher

May 2025 – Jul 2025

Columbia University – Northeast Big Data Innovation Hub (remote)

New York, NY

- Analyzed 2.4M+ NYC motor-vehicle crash records in Python (Pandas) for a borough-level crash-density study
- Built the cleaning and aggregation pipeline and the dashboards behind the team's published report

PROJECTS

Quantitative Trading Simulator | Python, Flask, PostgreSQL, Docker

Dec 2025 – Present

- Backtesting engine: pluggable strategies (MA crossover, RSI, ATR breakout), Sharpe, CAGR and drawdown metrics
- Risk layer (position caps, stop-losses) benchmarked vs. an unmanaged baseline; Flask REST API and dashboard
- Regime-switching GBM data generator (bull, bear, sideways); 23 pytest tests run in CI on Python 3.10 and 3.11

TradeDesk – stateful LLM chat service on the edge | TypeScript, Cloudflare Workers, Durable Objects

Apr 2026

- One Durable Object per session: single-threaded, strongly consistent conversation state with no locking in app code
- Context is the last 20 messages plus the three latest same-ticker analyses, pulled from D1 per request
- Streams Llama 3.3 70B replies as server-sent events; a tee'd copy is persisted to DO storage and D1 in the background
- D1 (SQLite) schema under migrations, indexed on ticker, session and recency; history and rollup routes
- Single-file Vite front end: streaming markdown render, Web Speech API voice input, per-ticker history sidebar

LEADERSHIP

Treasurer, TWESE African Association | Rutgers University

Sep 2024 – Present

- Manage the \$40,000 annual budget of a 100+ member pan-African student organization
- Primary liaison to the Rutgers University Student Assembly (RUSA) for supplemental funding and financial reporting

Outreach Chair, ColorStack | Rutgers University Chapter

2025 – Present

- Organized a 75+ attendee networking event connecting members with engineers and internship openings
- Recruit new members and bring recruiters and engineers to chapter events
